CONTENTS TO VOLUME 20

COMPUTATIONAL PHYSICS

Issue	*Page*	
1	i x	Preface to the Proceedings of the Third Summer School on Computational Physics, Prostredni Becva, Czechoslovakia, 4-13 September, 1979. J. Nadrchal
1	x	Organizing and programme committees.
1	1	The use of Chebyshev series in computational physics. C.M.M. Nex
1	7	Computational methods for sparse matrices. C.M.M. Nex
1	11	The recursive solution of the Schrodinger equation. R. Haydock
1	17	A survey of one-dimensional and multidimensional numerical integration. G.M. Phillips
1	29	Interpretation of the shape of the likelihood function around its minimum. F. James
1	37	Finite element method in physical and technical applications. M. Zlamal
1	43	Systems of evolution equations and the singular perturbation method. J. Mika
1	49	Large scale N-fermion calculations. W. Duch
1	53	Application of the singular perturbation method in nuclear reactor dynamics. A.M. Gadomski
1	61	Local representation of functions of D variables by means of discrete orthogonal polynomials. K. Helfrich
1	65	Two-dimensional model of the plasma coaxial accelerator. D. Odstrcil
1	69	Applications of integral equations of the first kind in experimental physics. E.L. Kosarev
1	77	Using REDUCE in problems of supersymmetry and supergravity. R. Grimm and H. Kuhnelt
1	81	Application of REDUCE-2 algebraic manipulation system in calibration problems of track chamber picture processing devices. I. Bajla and G.A. Ososkov
1	85	Analytical calculations in high energy physics by computer. V.P. Gerdt
1	91	On the linear convergence of quasi-Newton methods in finite and infinite dimensional Hilbert spaces. A. Lannes
1	97	Perturbative numerical methods to solve the Schrodinger equation. L.Gr. Ixaru
1	113	Solution of the non-stationary electron Boltzmann-equation for a weakly ionized collision dominated plasma. R. Winkler and J. Wilhelm
1	119	Variance and efficiency in Monte Carlo transport calculations. I. Lux
1	127	Numerical computation of electron lenses by the finite element method. B. Lencova
1	133	On the inclusion of macroscopic theory in Monte Carlo simulation using game theory. J. Tatarkiewicz
1	139	Adaptive stretching and rezoning as effective computational techniques for two-level paraxial Maxwell-Bloch simulation. F.P. Mattar and M.C. Newstein
1	165	OLYMPUS for a BESM-6: the development of medium-scale programs within the OLYMPUS framework: system OLYDES. P. Carl

COMPUTATIONAL PHYSICS (cont.)

Issue Page

2 181 A spline function approach to the numerical treatment of scattering and bound-state probl for non-local potentials. H.R. Fiebig

2 321 Book review. J.W. Eastwood

3 325 Large program implementation on mini computers. L. Fonti and L. Simoni

3 329 Lateral observation of transparent non-homogeneous axisymmetrical media. S. Ugniewski

COMPUTER PROGRAMS IN PHYSICS

Issue Page

2 191 A program to evaluate closed diagrams algebraically for angular momentum coupled produ operators. B.D. Chang and S.S.M. Wong

2 213 A program to calculate the eigenfunctions of the random phase approximation for two ele systems. M.J. Jamieson and I.H.K. Aldeen

2 221 Energy eigenvalues and bound-bound transitions of hydrogen atoms in a magnetic field us cylindrical basis functions. S.M. Kara

2 237 Calculation of LEED diffracted intensities. D.J. Titterington and C.G. Kinniburgh

2 267 Third version of a program for calculating the static interaction potential between an elec and a diatomic molecule. G. Raseev

2 275 Electron scattering by closed or open shell diatomic molecules. G. Raseev

2 291 A method and a program for the numerical evaluation of the Hilbert transform of a real function. O.E. Taurian

2 309 The method of Raptis and Allison with automatic error control. J. Mohamed

3 337 Calculation of the virtual photon spectrum in distorted wave analysis. L.E. Wright and C.W. Soto Vargas

3 349 Gilat-Raubenheimer method for k-space integration. A. Simunek

3 353 MFP: a code for calculating equation of state and optical data for noble gases. R.R. Pe and G.A. Moses

3 373 COLASE: a CO-N2-He laser kinetics code. S.A. Roberts

3 413 INJLOK: a CO2 laser injection locking code. A.R. Davies, K. Smith and R.M. Thomson

3 421 HYMNIABLOCK: eigenvalue solver for blocked matrices. R. Gruber

3 429 A program to solve rotating plasma problems. M. Bakker and M.S. van den Berg

3 441 A program for computing the Riemann Zeta function for complex argument. A. Banuelo R.A. Depine

3 447 Coulomb functions (negative energies). K.L. Bell and N.S. Scott

3 459 Erratum notice. Monte Carlo calculation of multiple scattering effects in thermal neutron scattering experiments. J.R.D. Copley

3 459 Erratum notice. Monte Carlo calculation of multiple scattering effects in thermal neutron scattering experiments: modification to horizontal cylinder geometry. J.R.D. Copley

3 462 Erratum notice. Calculation of wave-functions and collision matrix elements for one-electr diatomic molecules. A. Salin
